This task assignment resembles the work you will be looking at doing. The idea is that you will design the component and mock the data. This will then be sent back to ESG for review and then tied up to the backend by onshore developers.

Please look to put together a small component that will mock the data. The design doesn't have to be the same as below but as close as:

You must use:

- TypeScript with your React component
- Mirage JS to mock the data
- Formik to build the form
- MaterialUI (MUI) to tyle the component
